DOMINO

Automation and Integration Services

The simple way to improve productivity and reduce waste

Centralised label management and automated deployment software

Domino. Do more.

Sustainability and Productivity

**Domino Automation** is our software for centralised label management and automated deployment.

Designed to make automatic changeovers safe and simple helping you to reduce waste, drive sustainability initiatives while increasing productivity and efficiency.

◆ **Design and manage labels at a single location:** our sleek label design system enables using a universal interface, keeping training needs at a minimum.

◆ **Easily manage users and their permissions:** security features like Active Directory Integration enable using your existing IT network, simplifying user management.

◆ **Full audit trail for the management of production changes:** version control provides the ability for approval and roll-back procedures.

Product holds due to improper, or wrong, codes are one of the leading causes of downtime and waste globally.

Security and Ease of Use

Domino Automation

◆ **Browser-based thin client** – web browser enables multi-user access anywhere on the plant floor.

◆ **Simple user interface** – allows operators to quickly select, verify, and send messages to Domino printers reliably and accurately.

◆ **Modular design** – operations can be scaled and changes managed quickly through standard production workflow packages.

◆ **Packaged software solutions** – provide agility and resilience, future-proofing your solutions for the ever-changing industry trends and regulations.

◆ **Shop floor diagnostics and customer feedback interface** – provides an overview of the overall state of your automated production environment alerting to errors or warnings.

◆ **Security features** – Active Directory integration allows the management of user access credentials through existing user profiles.
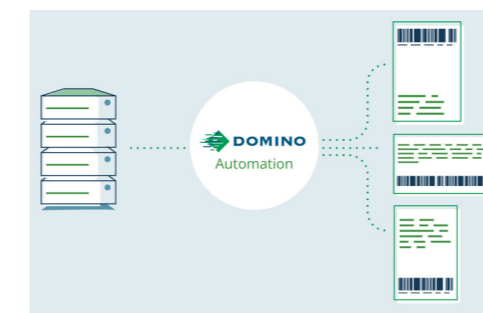

Domino Designer

◆ **Modern label design format** with a simplified user interface for quick label creation.

◆ **True WYSIWYG** (What You See Is What You Get), for accurate label design and precision placement, on all Domino printers.

◆ **Centralised label management** for consistency across all production lines.

Reduce Waste:

◆ Simple operator interface limits the amount of interaction, reducing possibilities for human error and rework.

◆ Automate processes and consolidate production data for maximum uptime and reliability.

◆ Version control with user validation and rollback features to minimise downtime due to label redesign.

Standardise:

◆ Interact with ERP or SCADA systems to manage message deployment through simple file transfer or network communications.

◆ Connect to external databases (i.e. SQL, Access, Excel) to populate message data automatically.

◆ Scripting capabilities allow for easy configuration of custom date/time offsets.

Secure your Production:

◆ Active Directory integration to manage users and their credentials easily through one's existing user database.

◆ Prevent product counterfeiting and provide traceability through Domino Automation's unique numbering workflow.

◆ Compatibility with Domino's R-Series vision system to validate message legibility and accuracy, preventing unnecessary recalls due to wrong or illegible messages.

◆ Resilient Design, fully scalable and upgradable solution adapts to growing needs.

Technical specification Domino Automation

System Requirements Hardware	
CPU	CPU: Intel or compatible (64bit) i5 processor or equivalent
Memory	8GB RAM or more
Hard drive	For projects > 10GB of available disk space
Display	800x600 or higher
Network	100 Base T Ethernet port and TCP/IP network connection
System Requirements Software	
Operating system	Windows Servers: 2012 (supporting users still running this product although EOL), 2016 and 2019 Microsoft Windows 10 operating system (64-bit) for Designer and configuration Microsoft.Net 4.8 or above ODBC 32 bit / MSXML 6.0 SP1
Database system	Microsoft SQL version 19 and above
Operator screen	Chrome, Edge or Firefox browser
